

How does Variable help eliminate waste across supply chains?

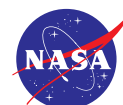

Manufacturing products with the same color and finish can be extremely challenging. Whether you produce raw materials or finished products, color consistency is critical to any manufacturer. But why is color so difficult? Different lighting conditions, modifications to substrate materials, faded physical color standards, and variations in human vision are just a few of the leading reasons why color is so difficult to produce.

Learn more about how others use our color instruments to reduce spillage, eliminate unnecessary expenses, and produce quality color across their supply chain.

- Analyze raw materials, substrates, and finished products with a portable color instrument
- Catch color inconsistencies before shipment from your suppliers and to your customers
- Measure your products with a portable, handheld device that connects via Bluetooth
- Download an easy-to-use mobile app; supported on iOS and Android operating systems
- Share inspection reports from your mobile device
- Outfit your entire network with a Spectro 1 device for consistent color communication
- Match to digital color libraries, including Sherwin-Williams, Valspar, PPG, and more
- Make your own private color library and share access with your teams
- Access to Pantone® Color and RAL Subscriptions by Variable
