VARIABLE™
Quality Control Module

Elevate Product Quality and Efficiency

Enhance Product Quality

The QC Module allows users to set color tolerances and measure each production run, ensuring your first sample matches the last. Safeguard against color defects before they hit the production line, and ensure that your end products meet the highest standards before reaching your customers.

Boost Process Efficiency

Efficiency meets precision with the QC Module. Achieve unparalleled accuracy in monitoring and refining color performance. Instant feedback and comprehensive historical trend data empower manufacturers to optimize every facet of their production cycles, driving efficiency gains across the board.

Dependable Data

Human vision discrepancies and variable lighting conditions can cast doubts on color analysis. Control how stakeholders measure and analyze color by deploying Spectro 1 color instrument across your network of suppliers, employees, and customers. Standardizing color measurement and analysis protocols ensures consistent results.

Customer-Centric Approach

Delight your customers by ensuring the product's color integrity before shipping. Resolving color issues before delivery can minimize returns and elevate customer satisfaction. Generate easily shareable Customer-Friendly reports with every inspection, fostering transparency and trust.

Increase Operating Profits

Downtime and excess wastage due to inconsistent color quality can erode your bottom line. The QC Module acts as a proactive shield, catching potential issues before they escalate into costly disruptions. Invest in the Variable QC Module to avoid those expensive mistakes.

Getting Started is Easy

Enjoy a 30-day free trial in the Spectro by Variable App on iOS and Android devices. Unleash the potential of this portable color measurement technology and embark on a new era of precision color tracking and analysis.
